

Stella *Gbaguidi*

SOFTWARE DEVELOPER | FULL-STACK | AI

CONTACT

Cotonou, Benin
stellagbaguidi68@gmail.com
linkedin.com/in/stella-gbaguidi-2424b7358
github.com/Stellouuuuu
portfolio-iota-ecru-48.vercel.app

SKILLS

Languages
Python, TypeScript, JavaScript, C++, Rust, SQL

Front-end
React, React Native (Expo), Vue.js

Back-end
Node.js, Express, FastAPI, REST, JWT

Data
PostgreSQL, PostGIS, pgvector, SQLite, PySpark, Airflow, ETL, NumPy

AI and security
Local LLMs (Ollama), RAG, prompt engineering, OWASP LLM Top 10, n8n

Tools
Git, Docker, GitHub Actions, GitLab CI

Quality
Unit and integration testing

LANGUAGES

French: native
English: intermediate

INTERESTS

Sewing, photography, fashion, music, pastry

PROFILE

Computer Science Bachelor's student at Epitech, I build full-stack applications and AI systems, and I measure what they do. My latest work: Mnemo, a private assistant that runs on my own machine, and AegisAI, a scanner that tests the security of AI applications. I also did web and data internships, and several team projects.

PROFESSIONAL EXPERIENCE

Data Analyst Intern (work-study, 2 days a week)
08/2026 – 11/2026
Port Autonome de Cotonou (PAC), Benin

- In a pair, built a prototype data platform for the port: daily ETL of ship calls, container movements and weather data (CSV, Excel, REST API) with quality checks, rejected rows set aside and an anomaly report, orchestrated by Airflow into PostgreSQL.
- My part: the React interface (activity and data-quality dashboard, executions, connectors, sharing, notifications) and FastAPI endpoints (JWT authentication, statistics, pipeline run and status).
- Worked on synthetic data with deliberate anomalies (real sources not yet available). Python, PySpark, Airflow, PostgreSQL, Docker, pytest, GitLab CI.

Web Development Intern
06/2025 – 11/2025
ECOIA, Calavi, Benin (internship)

- Developed and maintained web applications (JavaScript, HTML, CSS) for client projects, following the specifications, and integrated third-party APIs to extend existing applications.
- Designed and modeled relational and non-relational databases, and set up unit and integration tests to make the delivered code more reliable.

SELECTED PROJECTS

AegisAI · Security scanner for AI applications
Personal project · Python, FastAPI, React, SQLite

- Black-box scanner that attacks chatbots, agents and RAG apps through their API and reports a flaw only if it replays: 25 attack scenarios, OWASP LLM Top 10 mapping, PDF and SARIF reports.
- 245 automated tests. Measured on a real local model, with a control run showing which of the adaptive attacks added anything.

Mnemo · Private assistant that runs locally
Personal project · React, TypeScript, Node.js, PostgreSQL + pgvector, Ollama

- Local model with an editable memory, answers that cite the document and page, and tools whose permissions are decided by the server, never by the model.
- Audited with AegisAI: 35 of 35 injected deletion requests held for approval. Compared 3 local models on the same code.

Gestion de boutique · Mobile and web app for shops
Personal project · Expo, React Native, Supabase, SQLite

- Records sales offline and syncs later; stock, balances and inventories. Web version deployed and installable on a phone, with 303 automated tests.

OTHER PROJECTS

MyTorch. Neural network written from scratch (Python, NumPy), 88.6% accuracy on 72,303 unseen chess positions. I wrote the data pipeline, the analyzer CLI and the experiments. Epitech, pair.

R-Type. Networked shooter in C++ with an authoritative UDP server. I owned the binary protocol and the server, with a test that fails the build above 5 KB/s. Epitech, team of 4.

Threshold. Multi-service dashboard (React, Express, PostgreSQL): 10 widgets, OAuth, one-time-code accounts. Epitech, pair.

Earlier projects. DépannGo, an on-demand roadside assistance MVP (PostGIS search, Socket.io tracking, team of 3); MyTeams, a multi-client TCP server in Rust; PERSONA and CODENAME, n8n and Ollama workflows and a system prompt hardened against prompt injection (Epitech).

EDUCATION

Bachelor's Degree in Computer Science
01/2024 – present
Epitech, Cotonou, Benin

Scientific Baccalaureate (Series C), Honors
09/2022 – 07/2023
CS La Grande Académie, Calavi, Benin
